Fast Footwear Facts

U.S. Footwear Workers

Annual U.S. Footwear Spending

Pairs of shoes imported each year

Pairs of shoes imported for every person in the U.S. in 2017

You're paying more than you should for shoes.

Footwear is one of the highest taxed goods you buy. An iPhone has a **0%** duty rate, but footwear averages **11%** and goes up to **67.5%** for certain footwear!

Outdated Footwear Duties from the 1930s mean Americans paid **\$7 billion** more than they should have for footwear in 2017.

Families pay **more than half a billion dollars** more for their kids' shoes each year than they should due to these taxes.

What would happen if footwear duties were eliminated?

LOWER COSTS

Savings quickly make their way to consumers through the fiercely competitive nature of the mass retail footwear market.

INNOVATIVE SHOES

Savings enable companies to invest in designing new materials and shoes using 3D printing technology and advanced manufacturing, helping them compete well into the 21st century.

MORE JOBS

100% of current U.S. footwear jobs depend on international trade. Savings go back into the footwear supply chain with more and better-paying U.S. jobs, from domestic plants to retail stores.
