# Quality and Product Rework Observations from 2022 and looking forward

- ✓ QCI has performed record volumes of mold remediation services in 2022

Record monsoons, port congestion/closures, cargo at sea much longer than norms.

- ✓ Port congestion improved, but inventories remain high heading into '23

No room at the Inn (warehouse)! *If/when product is stored outdoors for extended periods of time, product integrity may be impacted.*

- ✓ Supply chain sourcing diversification continues

Onboarding of new factories takes time, *New factories = New problems?*

The Global Shipping Crisis

July U.S. Container Import Volume Maintains Record Trend for 2022 as Port Congestion and Delays Persist

## The Monsoon Is Becoming More Extreme

South Asia's monsoon is inextricably linked, culturally and economically, to much of Asia. Climate change is making it increasingly violent and erratic.

U.S. works with firms in supply chains to ease port congestion

After Unprecedented Heatwaves, Monsoon Rains and the Worst Floods in Over a Century Devastate South Asia

# What About Product Rework & Sustainability?

Product rework can play an important role in your sustainability programs.

Keeping products and materials in use can extend a product's life cycle as originally planned.

Restoring product to first-quality may allow a very desirable product to be sold at its original suggested retail price.

Extend the life of an existing product via quality and performance corrections made through product rework.

***Product Rework = Sustainability Solution***

**Recover Goods**

**Minimize Waste**

**Extend Product Life Cycle**
